

Building Envelope Failures: Lessons Learned and Methods of Prevention

A detail oriented program presented by industry experts showcasing their shared experiences and lessons learned, including case studies and practical solutions.

SCHEDULE

CHICAGO February 29, 2012

MILWAUKEE March 1, 2012

MINNEAPOLIS March 14, 2012

While key building envelope components such as roofs, exterior walls, windows, and waterproofing systems should perform for many years or even several decades, too often mistakes made during design, construction, or maintenance result in their premature failure. Premature failure of the building envelope usually not only results in significant financial losses for building owners and managers but can also cause other serious problems including property damage, mold, energy loss, and disruption of the building's occupants and operations.

This series of presentations will cover numerous case studies of "real world" premature failures of roofs, exterior walls, windows, and waterproofing systems and highlight the cause(s) of the failures, what was done to solve the problems, and "lessons learned" including methods for preventing future similar problems.

Please join us from 7:00 am to 1:00 pm for this wonderful networking opportunity with your industry peers and learn valuable information to bring back to your facilities, all while earning Continuing Education Credits for AFE and AIA. This year's key speakers will include: Gary Patrick, AIA, RRC; Michael D. Remington, P.E., and Pete Nottleson.

Please contact Fred King with any questions.
